

A one-page, double-spaced, typed essay outlining the applicant's academic interests and goals.

Growing up in a small village near the Line of Control in Jammu and Kashmir, I was acutely aware of how external instability could disrupt livelihoods. This reality shaped my determination to create opportunities for my community. Years later, during my entrepreneurial journey, I found that data could reveal hidden trends and power decisions that deliver real impact. While managing The Loud Kitchens at NIT Srinagar, I analysed customer data and uncovered actionable insights that increased engagement and revenue by 11%. This moment solidified my belief in analytics as a means to drive meaningful change.

My academic background in Mechanical Engineering at NIT Srinagar enhanced my quantitative and problem-solving skills. Beyond coursework, my entrepreneurial ventures, such as Traway Travels, allowed me to apply analytics to optimise operations and increase revenue by 15% within eight months. These experiences underscored the power of data-driven decision-making. Independent projects deepened my technical expertise. Using Python and Tableau, I analysed Amazon India sales data to uncover trends and build actionable dashboards. Similarly, I forecasted demand and customer segmentation for The Loud Kitchens using historical data, enabling efficient inventory management. These projects honed my ability to translate complex datasets into practical insights and decisions.

The decision to pursue a master's in Business Analytics at the Naveen Jindal School of Management is driven by my ambition to build scalable, data-driven solutions for my startup. The program's focus on experiential learning and collaboration aligns with my goals. I am particularly drawn to Professor Gaurav Shekhar's expertise in AI and Professor Sumit Sarkar's work in the sharing economy and knowledge management, as their guidance would help refine my ability to address real-world challenges.

In the short term, I plan to gain experience as a data consultant with leading Big 4 consulting firms. This role will allow me to collaborate with diverse organisations and businesses, streamlining their operations and uncovering their growth opportunities using analytics. I aim to return to India to establish a venture focused on empowering analytics for companies and startups in my region. Leveraging analytics, I provide them with actionable insights into market trends, customer behaviour, and operational efficiencies, enabling these businesses to overcome challenges and drive economic growth. This mission is deeply rooted in my upbringing in Jammu and Kashmir.
